

Unifying SIP and WEB Worlds with LUA

FOSDEM 2011

Brussels, Belgium

Daniel-Constantin Mierla

Co-Founder Kamailio SIP Server Project

www.asipto.com

It is all about love

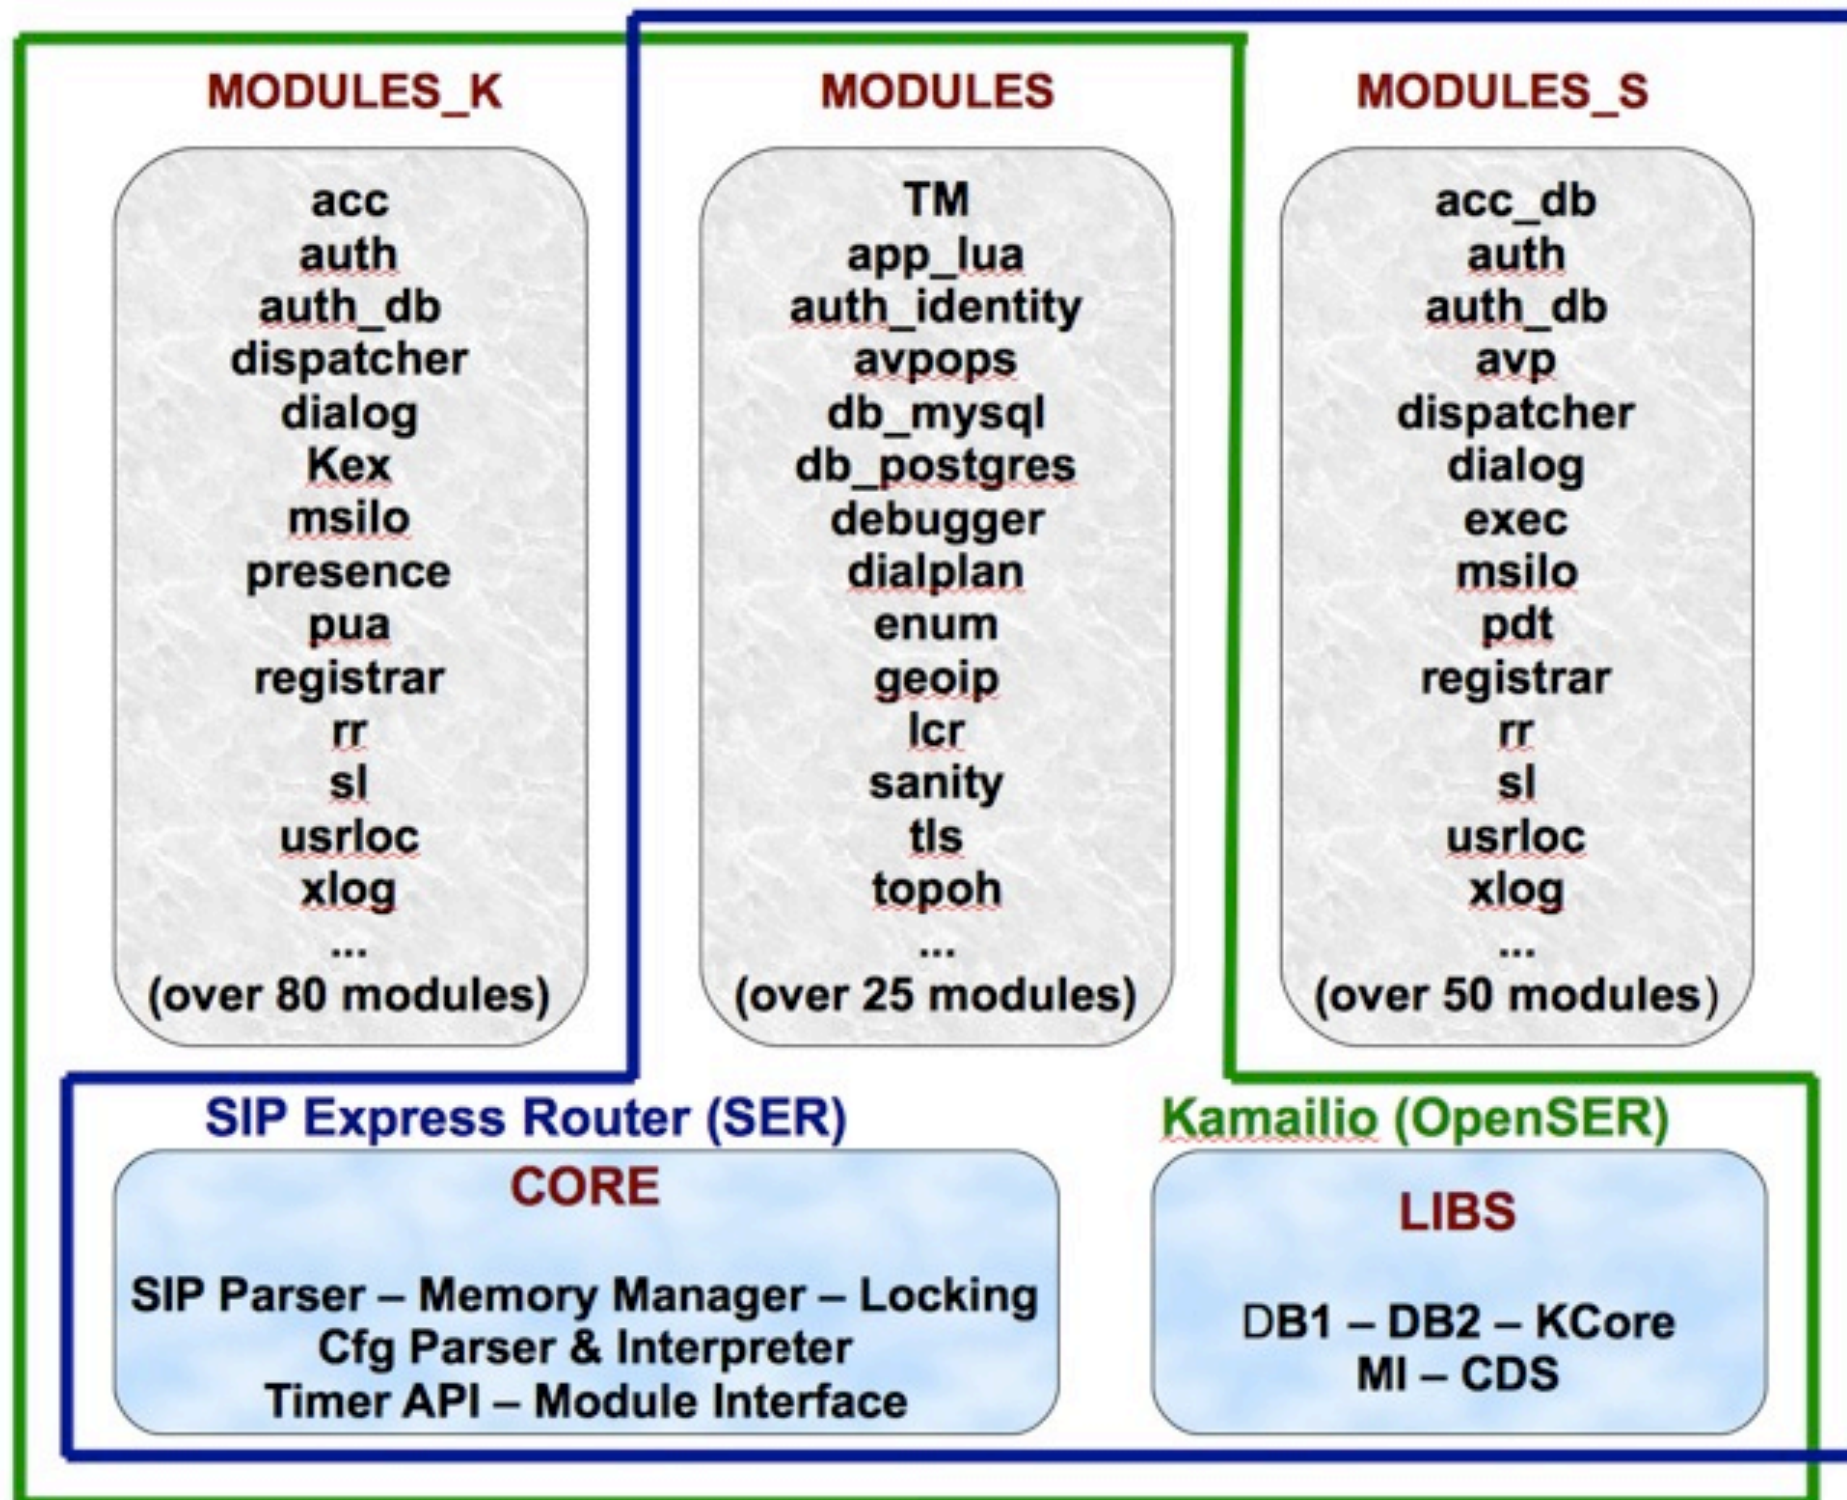

Wine, moon ... and you
... hacking SIP and Web

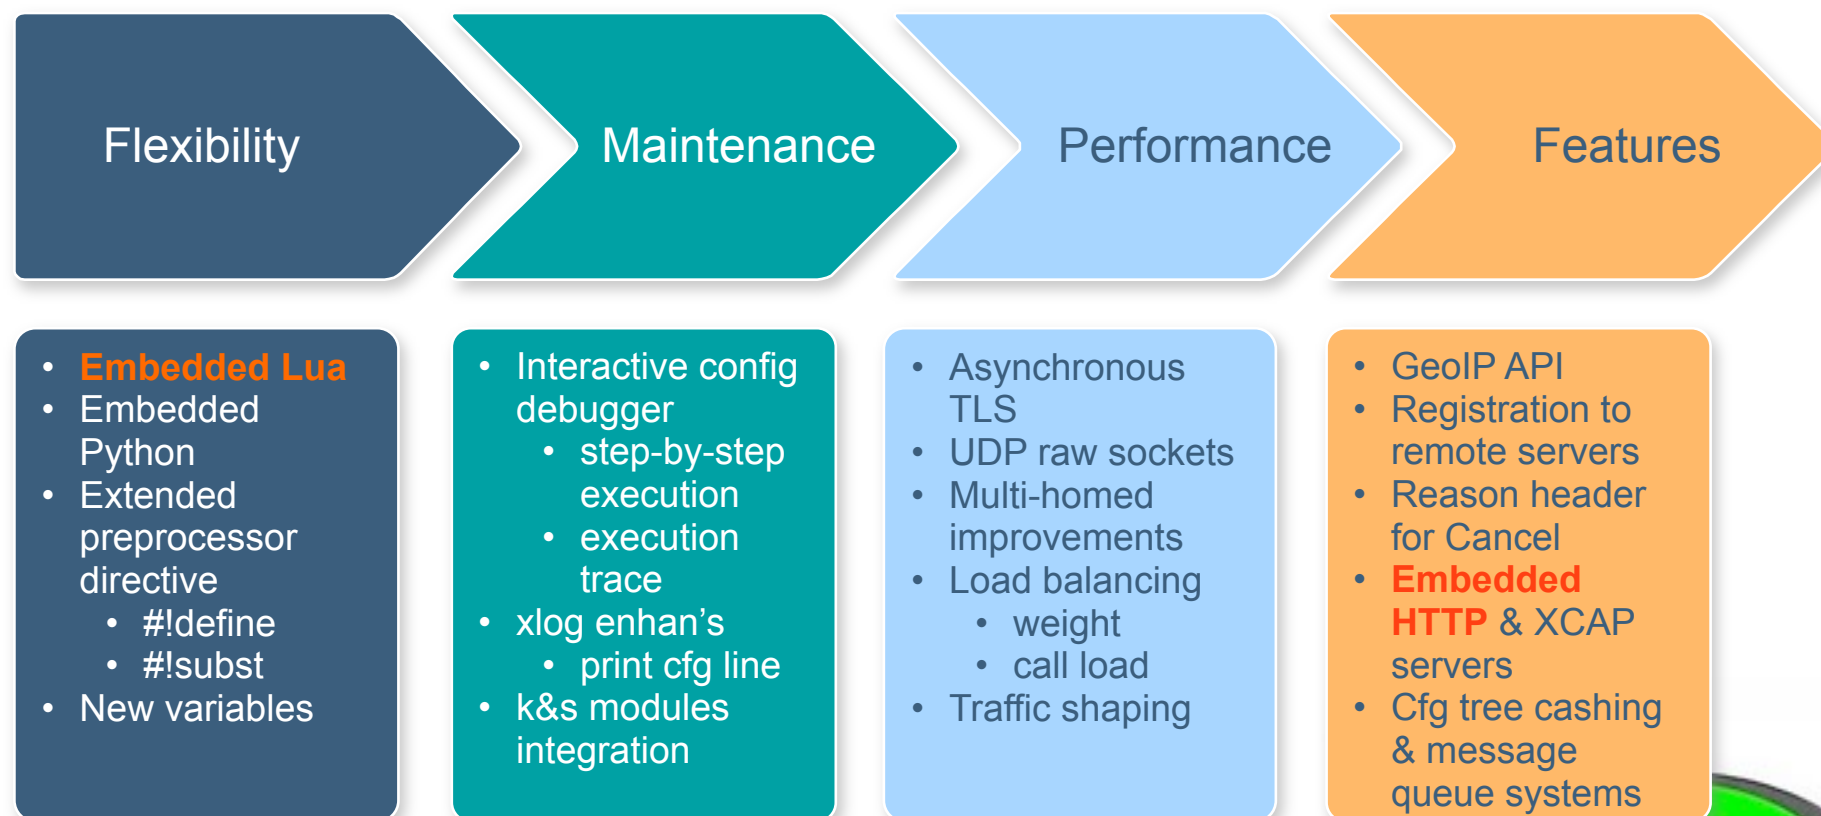

A bit of Kamailio project history

Kamailio and SER

New in Kamailio v3.1.x

HTTP and Web 2.0

Interaction:

- access Kamailio SIP world via HTTP
- access Web world from Kamailio via HTTP

HTTP vs SIP

GET /stats HTTP/1.1.

Host: 127.0.0.1:5060.

User-Agent: Mozilla/5.0 (X11; U; Linux i686; en-US; rv:1.9.2.12) Gecko/20101206 Ubuntu/10.04 (lucid) Firefox/3.6.12.

Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8.

Accept-Language: en-us,en;q=0.5.

Accept-Encoding: gzip,deflate.

Accept-Charset: ISO-8859-1,utf-8;q=0.7,*;q=0.7.

Keep-Alive: 115.

Connection: keep-alive.

.

REGISTER sip:192.168.56.103 SIP/2.0.

Via: SIP/2.0/UDP 192.168.56.103:5062;branch=z9hG4bK2F912227.

CSeq: 7417 REGISTER.

To: "102" <sip:102@192.168.56.103>.

Expires: 900.

From: "102" <sip:102@192.168.56.103>.

Call-ID: 81570709@192.168.56.103.

Content-Length: 0.

User-Agent: kphone/4.2.

Event: registration.

Allow-Events: presence.

Contact: "102" <sip:102@192.168.56.103:5062;transport=udp>;methods="INVITE, MESSAGE, OPTIONS, BYE, CANCEL, NOTIFY, ACK, REFER".

.

Reuse SIP parser to handle HTTP requests!!!

XHTTP module

Characteristics

- handle HTTP requests sent to Kamailio
 - execute **event_route[xhttp:request]**
 - reuses the SIP parser from Kamailio core
 - all functions available for SIP requests can be used for HTTP requests, e.g.:
 - user authentication (www digest)
 - IP authentication
 - no forwarding support for HTTP request, just replying
 - no dependency on external libraries
- compatibility
 - http/1.0
 - http/1.1
- transport layers - all supported by Kamailio core
 - HTTP over TCP
 - HTTP over TLS (aka HTTPS)
 - HTTP over UDP (yeah!!!)
 - HTTP over SCTP (gosh!!!)

Browse the Kamailio Instance

```
event_route[xhttp:request] {
    set_reply_close();
    set_reply_no_connect();
    if(method!="GET")
    {
        xhttp_reply("404", "Not found", "text/html", "<html><body>Method not"
            " supported ($rm from $si:$sp)</body></html>");
        exit;
    }
#ifdef WITH_XHTTPAUTH
    if (!www_authorize("xhttp", "subscriber"))
    {
        www_challenge("xhttp", "0");
        exit;
    }
#endif
    if($hu=~"^/stats")
    {
        xhttp_reply("200", "OK", "text/html", "<html><body>"
            "<div align='center'>"
            "<strong>Kamailio Statistics</strong><br />"
            "SHM used: $stat(used_size)<br />"
            "SHM real used: $stat(real_used_size)<br />"
            "SHM free: $stat(free_size)<br />"
            "UL users: $stat(location-users)<br />"
            "UL contacts: $stat(location-contacts)<br />"
            "</div></body></html>");
        exit;
    }

    # no handler for URL
    xhttp_reply("404", "Not found", "text/html", "<html><body>URL not"
        " found ($hu from $si:$sp)</body></html>");
    exit;
}
```

used: 1492080
SHM free: 32062352
UL users: 1
UL contacts: 1
</div></body></html>

Kamailio and SIP routing

Where we stand today?

- flexible configuration language, still limited pretty much to SIP only
- the power is in hands (and brain) of administrator
- SIP specific extensions added mainly by writing C modules
- for the rest: **Lua**, Perl, Python and Java

Lua

What is Lua?

- Lua is a powerful, fast, lightweight, embeddable scripting language.
- Lua combines simple procedural syntax with powerful data description constructs based on associative arrays and extensible semantics. Lua is dynamically typed, runs by interpreting bytecode for a register-based virtual machine, and has automatic memory management with incremental garbage collection, making it ideal for configuration, scripting, and rapid prototyping.
- <http://www.lua.org>

Lua

Why choose Lua?

- Lua has been used in many industrial applications (e.g., Adobe's Photoshop Lightroom), with an emphasis on embedded systems (e.g., the Ginga middleware for digital TV in Brazil) and games (e.g., World of Warcraft). Lua is currently the leading scripting language in games..
- Lua is supported by other telephony engines, e.g., Asterisk and FreeSWITCH
- <http://www.lua.org>

Lua

More about Lua?

- is fast
- is portable
- is embeddable
- is powerful (but simple)
- is small
- is free
- <http://www.lua.org>

Kamailio and Lua

Why together?

- need to integrate with other communication platforms
- it is about realtime communication, so being fast is important
- routing logic may require non-SIP related operations
- all characteristics of Lua indicates it a very good candidate

Kamailio and Lua

How does it work?

- load module: app_lua
- Lua scripts can be loaded at startup or on-the-fly at runtime
- entire Lua scripts can be executed or just functions from the scripts
- Lua scripts have access to SIP messages and config variables
- Lua scripts can return back config variables
- Lua scripts can execute functions from config file

http://kamailio.org/docs/modules/devel/modules/app_lua.html

Kamailio Lua API

Lua packages

- package **sr**
 - access to Kamailio core functions
 - method to execute functions exported by modules
 - container for other sub-packages
- package **sr.hdr**
 - header manipulation
 - get, add, remove
- package **sr.pv**
 - pseudo-variables manipulation
 - access to all pseudo-variables - hundreds of them
- package **sr.sl**
 - exports internal sl module API (stateless reply)
- many more packages in devel version
 - including direct access to **xhttp** module

<http://sip-router.org/wiki/api/lua/devel>

    <div align='center'>
        <strong>Kamailio Statistics</strong><br />
        <table width='50%' id='tstats'>
            <tr><th>Description</th><th>Value</th></th>
tr>
            <tr><td>SHM used</td><td>
```

HTTP Reply example

Lua script:

```
        .. sr.pv.get("$stat(used_size)")
        .. "</td></tr>"
        .. "<tr class='alt'><td>SHM real used</td><td>"
        .. sr.pv.get("$stat(real_used_size)")
        .. "</td></tr>"
        .. "<tr><td>SHM free</td><td>"
        .. sr.pv.get("$stat(free_size)")
        .. "</td></tr>"
        .. "<tr class='alt'><td>UL users</td><td>"
        .. sr.pv.get("$stat(location-users)")
        .. "</td></tr>"
        .. "<tr><td>UL contacts</td><td>"
        .. sr.pv.get("$stat(location-contacts)")
        .. "</td></tr>"
        .. "<tr class='alt'><td>Received reqs</td><td>"
        .. sr.pv.get("$stat(rcv_requests)")
        .. "</td></tr>"
        .. "</td></tr>"
    </table></div></body></html>]]];

    sr.xhttp.reply(200, "OK", "text/html", htmlBody);
end
```

Browse the Kamailio Instance

HTTP Reply example *Kamailio config:*

```
event_route[xhttp:request] {
    set_reply_close();
    set_reply_no_connect();
    if(method!="GET")
    {
        xhttp_reply("404", "Not found", "text/html", "<html><body>Method not"
                    " supported ($rm from $si:$sp)</body></html>");
        exit;
    }
    #ifndef WITH_XHTTPAUTH
    if (!www_authorize("xhttp", "subscriber"))
    {
        www_challenge("xhttp", "0");
        exit;
    }
    #endif
    if($hu=~"^/stats")
    {
        if(!lua_runstring("htmlStats()"))
        {
            xdbg("failed to send reply from Lua!\n");
        }
        exit;
    }

    # no handler for URL
    xhttp_reply("404", "Not found", "text/html", "<html><body>URL not"
                " found ($hu from $si:$sp)</body></html>");

    exit;
}
```

HTTP Query from Config File

UTILS Module

- ***`http_query(url, result)`***

```
http_query("http://10.10.10.10/allow.php?userid=$fU", "$var(result)");
```

<http://kamailio.org/docs/modules/stable/modules/utils.html>

SIPWEET

twitter

SIPWEET

Send tweets on SIP events

- missed call notification
- instant messaging
- reminders

Monitor tweets for SIP services

- tweet-to-dial
- reminder setup
- scheduled calls
- profile update

SIPWEET

Design

- Lua twitter library
- Twitter operation is an HTTP request
 - can take some time to be processed
 - we cannot afford that when processing SIP signaling
 - solution: use asynchronous processing
 - config file message queue
 - dedicated process for twitter operations
- Kamailio modules
 - app_lua
 - mqueue
 - rtimer
 - sqlops
- Sample implementation
 - notification of a missed call
 - use of Twitter direct message

SIPWEET

Config

```
loadmodule "app_lua.so"
loadmodule "rtimer.so"
loadmodule "sqlops.so"
loadmodule "mqueue.so"

# ----- app_lua -----
modparam("app_lua", "load",
    "/usr/local/etc/kamailio/lua/sipweet.lua")

# ----- rtimer -----
modparam("rtimer", "timer",
    "name=sipweet;interval=10;mode=1;")
modparam("rtimer", "exec",
    "timer=sipweet;route=SIPWEET;")

# ----- sqlops -----
modparam("sqlops", "sqlcon",
    "ca=>mysql://openser:openserrw@localhost/openser")

# ----- mqueue -----
modparam("mqueue", "mqueue", "name=sipweet")
```

SIPWEET

Config

```
# Twitter routing
route[SIPWEET] {
    # consume tweeties
    while(mq_fetch("sipweet"))
    {
        xlog("Tweeting to $mqk(sipweet) [[${mqv(sipweet)}]]\n");

        # get twitter user
        sql_query("ca",
            "select twuser from sipweetusers where sipuser='${mqk(sipweet)}'",
            "ra");
        if($dbr(ra=>rows)>0)
        {
            $var(twuser) = $dbr(ra=>[0,0]);
            $var(twmsg) = $mqv(sipweet);
            if(!lua_runstring("sipweetdm([[${var(twuser)}]], [[${var(twmsg)}]])"))
            {
                xdbg("failed to send dm to: $mqk(sipweet) - ${var(twuser)}!\n");
            }
        }
    }
}
```

SIPWEET

Config

```
# Twitees queuing
route[TWQUEUE] {
    if(!is_method("INVITE"))
        return;
    mq_add("sipweet", "$rU", "Missed call from $fU ($Tf)");
}

route {
    ...
    if(!lookup("location")) {
        route(TWQUEUE);
        t_newtran();
        t_reply("404", "Not Found");
        exit;
    }
    ...
}
```

SIPWEET

Database table

```
CREATE TABLE `sipweetusers` (  
  `id` int(10) unsigned NOT NULL AUTO_INCREMENT,  
  `twuser` varchar(64) NOT NULL,  
  `sipuser` varchar(64) NOT NULL,  
  PRIMARY KEY (`id`),  
  UNIQUE KEY (`twuser`),  
  UNIQUE KEY (`sipuser`)  
);
```

SIPWEET

Lua script

```
-- SIPweet

-- loading module
require("twitter")

local initialized = 0
local mytw

function sipweetinit()
    if initialized == 0 then
        mytw = twitter.client("Consumer Key",
                              "Consumer Secret",
                              "OAuth Token",
                              "OAuth Token Secret");

        initialized = 1
    end
end

function sipweetdm(userid, message)
    sipweetinit()
    mytw:sendMessage{ user = userid, text = message }
end
```

SIPWEET

And the messages goes ...

- nice and quick to your twitter client

New since Kamailio v3.1.x

SIP:Provider - <http://www.sipwise.com/products/spce/>

- * complete VoIP servicing platform using Kamailio for SIP routing
- * administration interface and user portal
- * ready to roll-out open source Community Edition
- * easy to install with DEB packages - images for VMWare and VirtualBox

The screenshot shows the 'sip:provider CE Demo Company' user portal. At the top right, there is a 'LOGOUT' link and a status 'LOGGED IN AS CETEST1'. Below this is a navigation bar with tabs: DESKTOP, CALLS, VOICEMAILS, ADDRESSBOOK, CALL FORWARD, CALL BARRING, REMINDER, and ACCOUNT. The 'DESKTOP' tab is active, displaying a 'Welcome to your personal desktop.' message. The main content area is divided into three columns. The left column, 'RECENT CALLS', includes filters for incoming, outgoing, and forwarded calls, and a table of recent calls. The middle column, 'CLIENTS', shows '1 client devices registered' and 'NEW VOICEMAILS' with a link to 'all voicemails'. The right column, 'CALL FORWARDS', shows 'call forward active' with a 'view settings' link. Below this, a 'REMINDER' section shows 'reminder is active' with another 'view settings' link. At the bottom, contact information for 'sip:provider CE Demo Company' is listed, including a telephone number, fax number, and email address. The footer contains logos for sipwise and sip:provider.

Direction	Number	Duration	Date/Time
Incoming	+4311002	00:20	30.11.2010 18:37:34

New since Kamailio v3.1.x

New since Kamailio v3.1.x

- Many native extensions to Lua
- Private memory troubleshooting
- RLS polishing and Presence server scalability enhancements
- cfg framework group - multivalues
- partitioned user location services
- IMS extensions based on OpenIMSCore
 - *approx. 10 new modules*
- new functionalities to many modules: textops, kex, acc, dialog, dispatcher, utils ...
- Planned
 - merge duplicated modules
 - more presence server optimizations and scalability
 - upgrades to RPC and atomic counter stats
 - new features ...

Concluding

- You can do HTTP GET requests from Kamailio config file
 - utils module
- You can access Kamailio internals via HTTP
 - xhttp module
- Using Embedded Lua is easier to build rich SIP-Web services
 - Lua scripts are fast executed
